

# TiDB TTL Table - T4 Distilling massive data, over time

T4 - Jiazhi Wen / Mengyu Hu / Xiaoguang Sun

## BigData Scale Transactions

with Internet of Everything

Price

Value

#### 可选方案

- 降低成本
  - 分级存储
  - 空间优化
- 提升单位价值
  - 高价值数据
  - 价值蒸馏

#### TLabe

- 数据生命周期管理
- 回收策略
  - 按行
  - 按分区

#### 回收策略 - 按行

```
CREATE TABLE ttl_table {
  id varchar(255),
  author varchar(255),
  content varchar(65535),
  PRIMARY_KEY(id)
} TTL='10m' TTL_GRANULARITY='ROW';
```

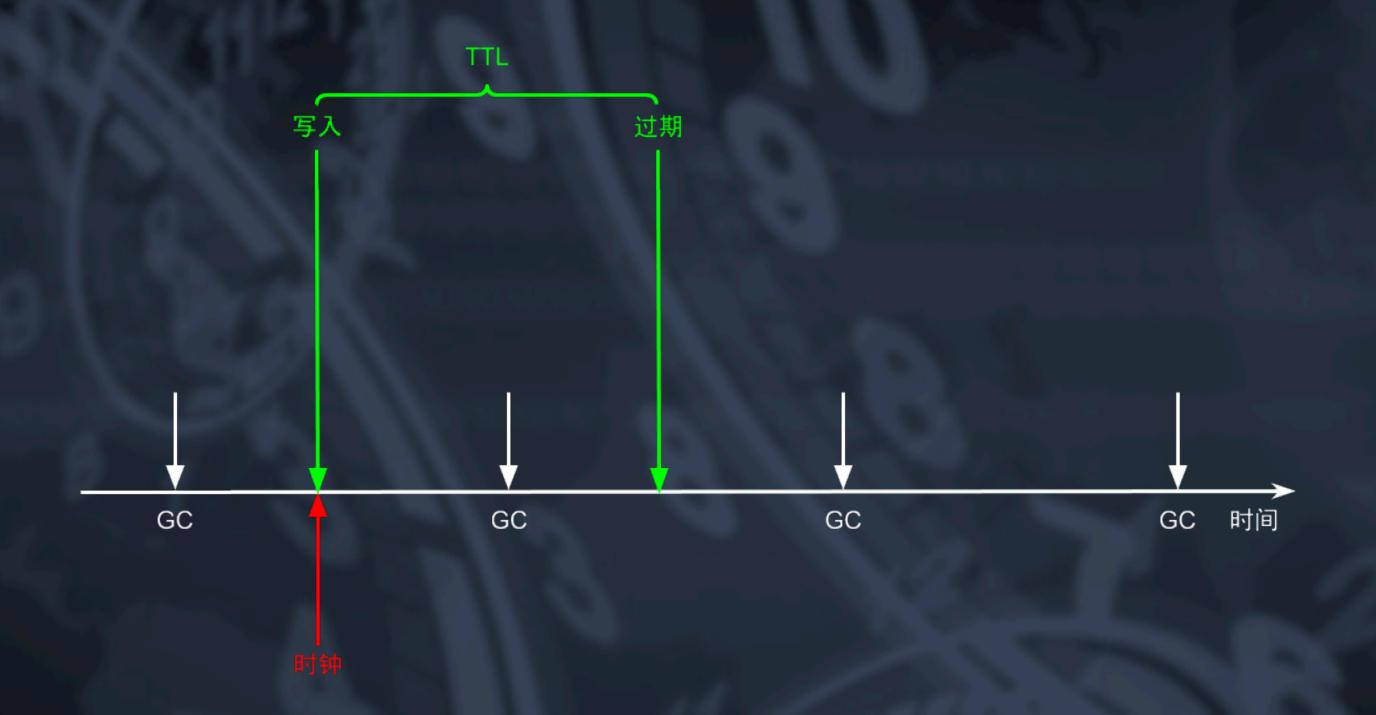

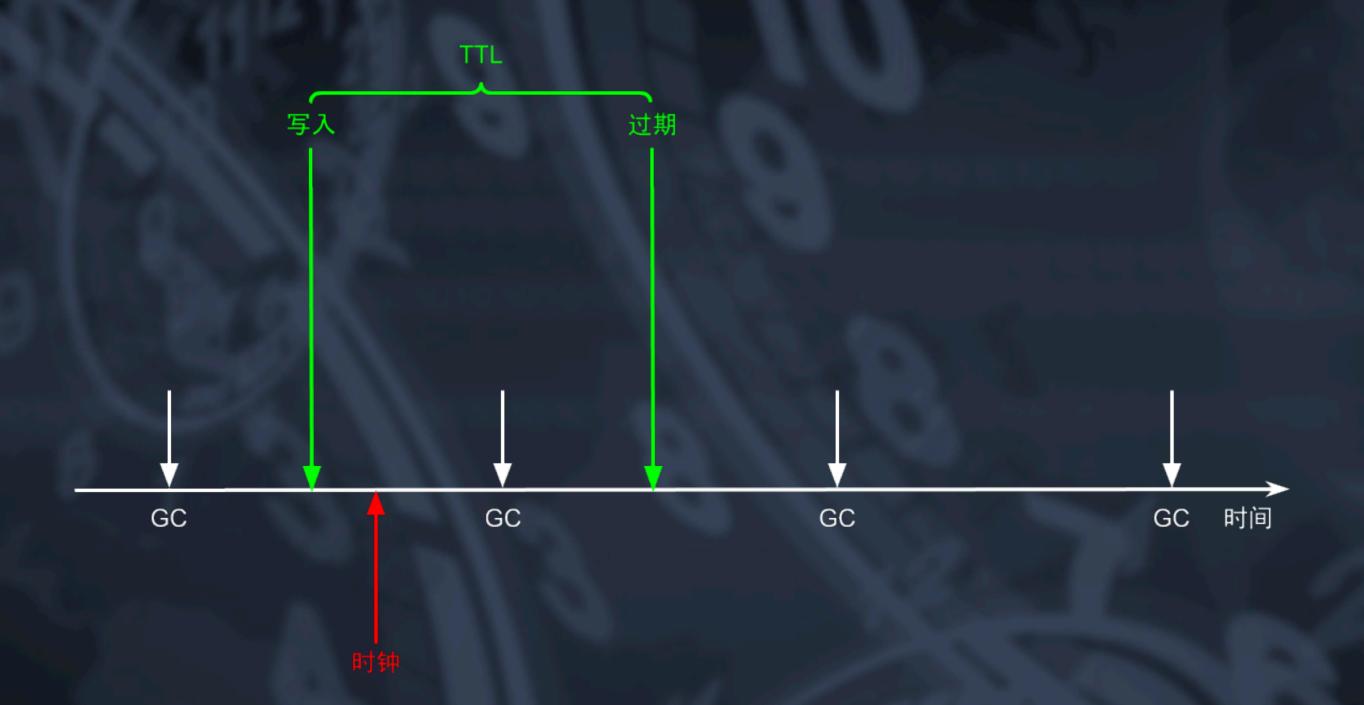

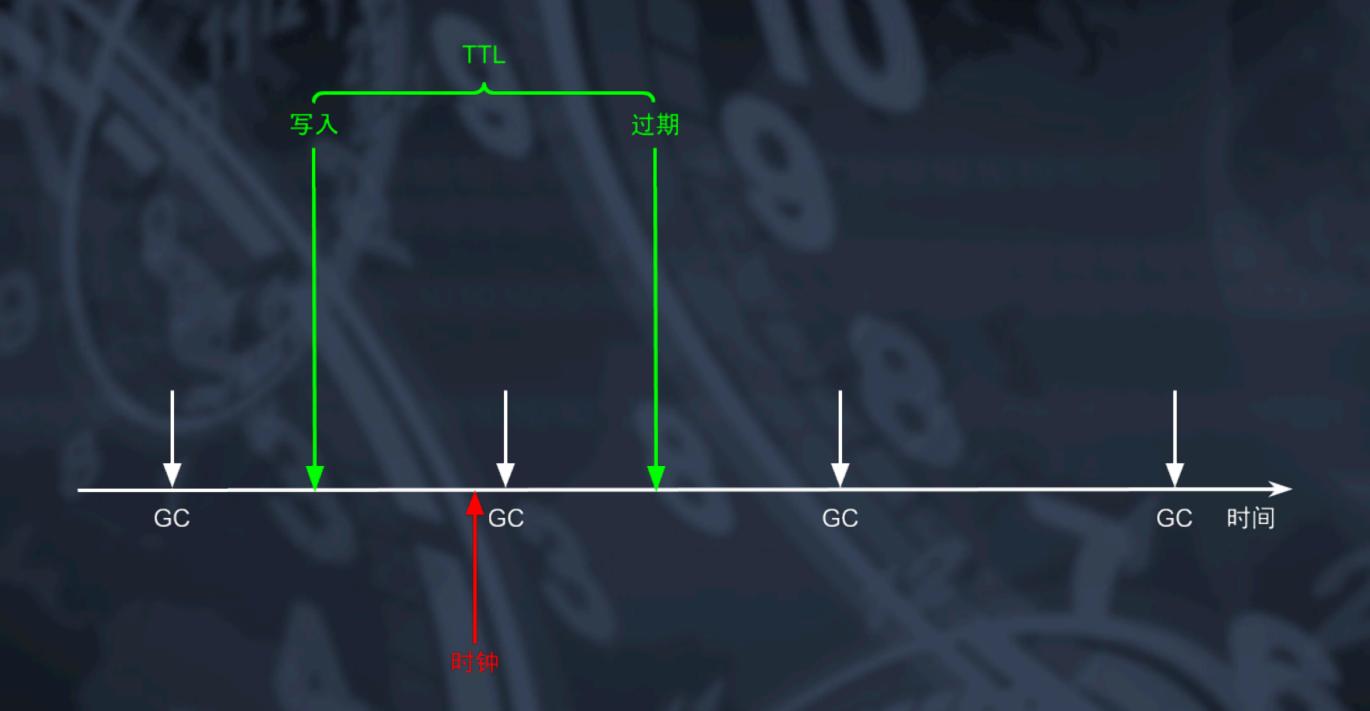

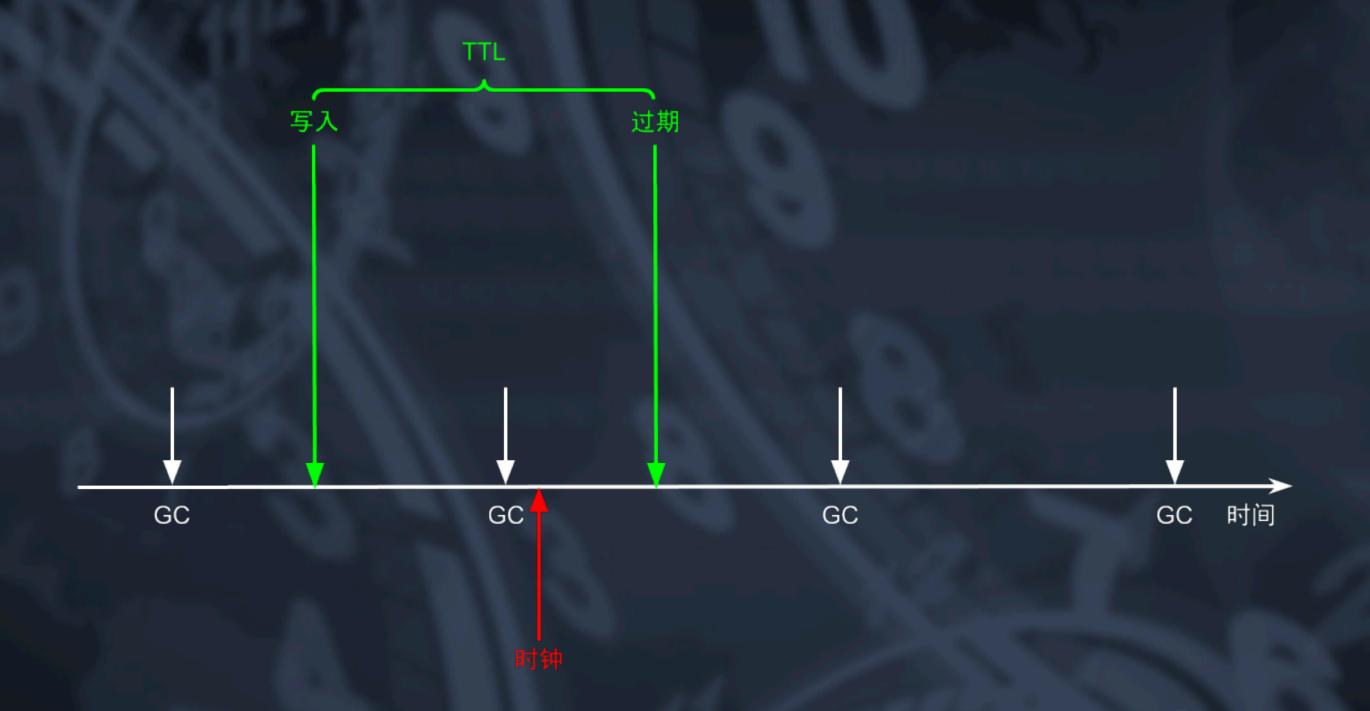

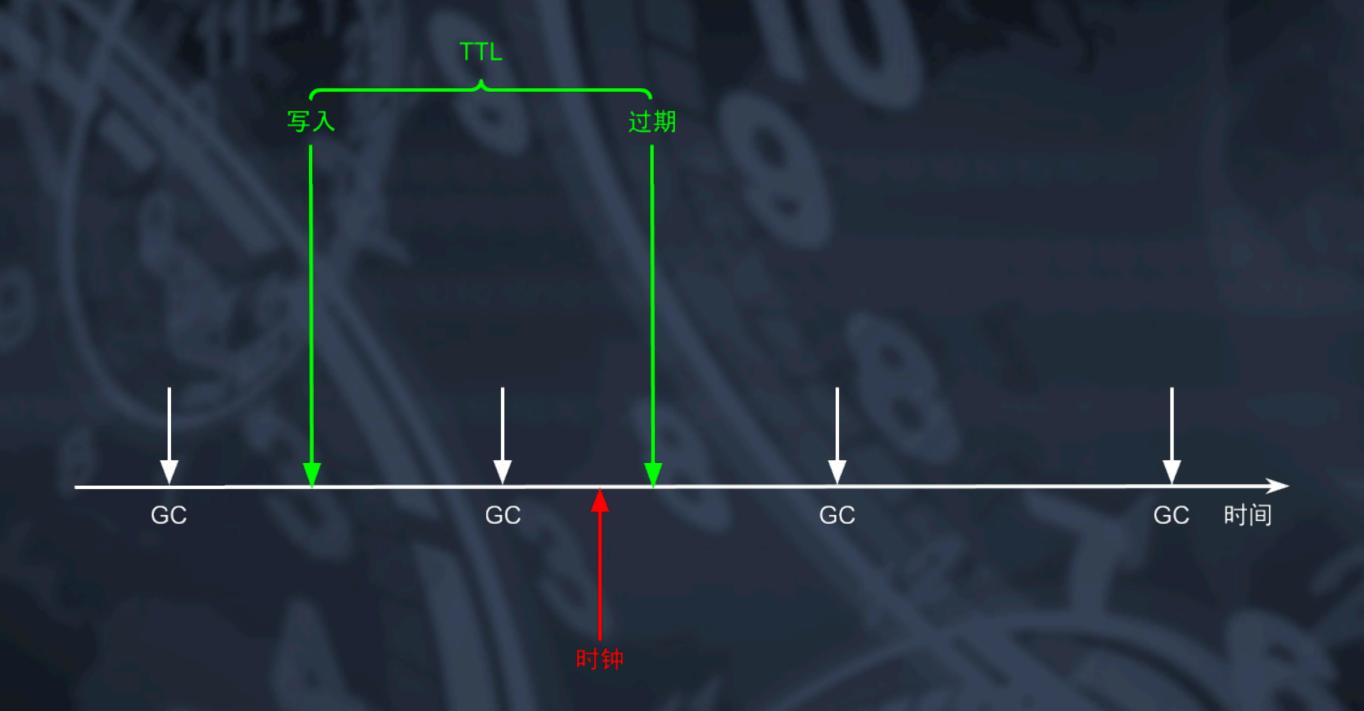

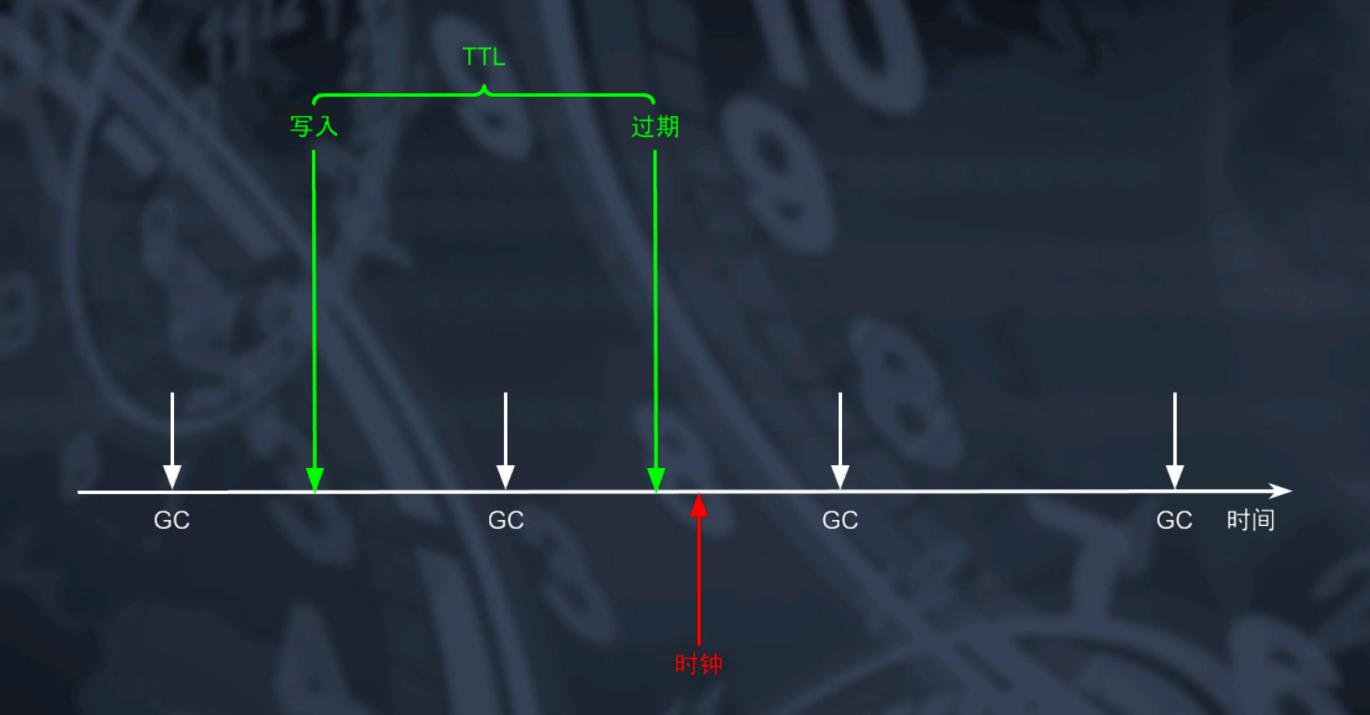

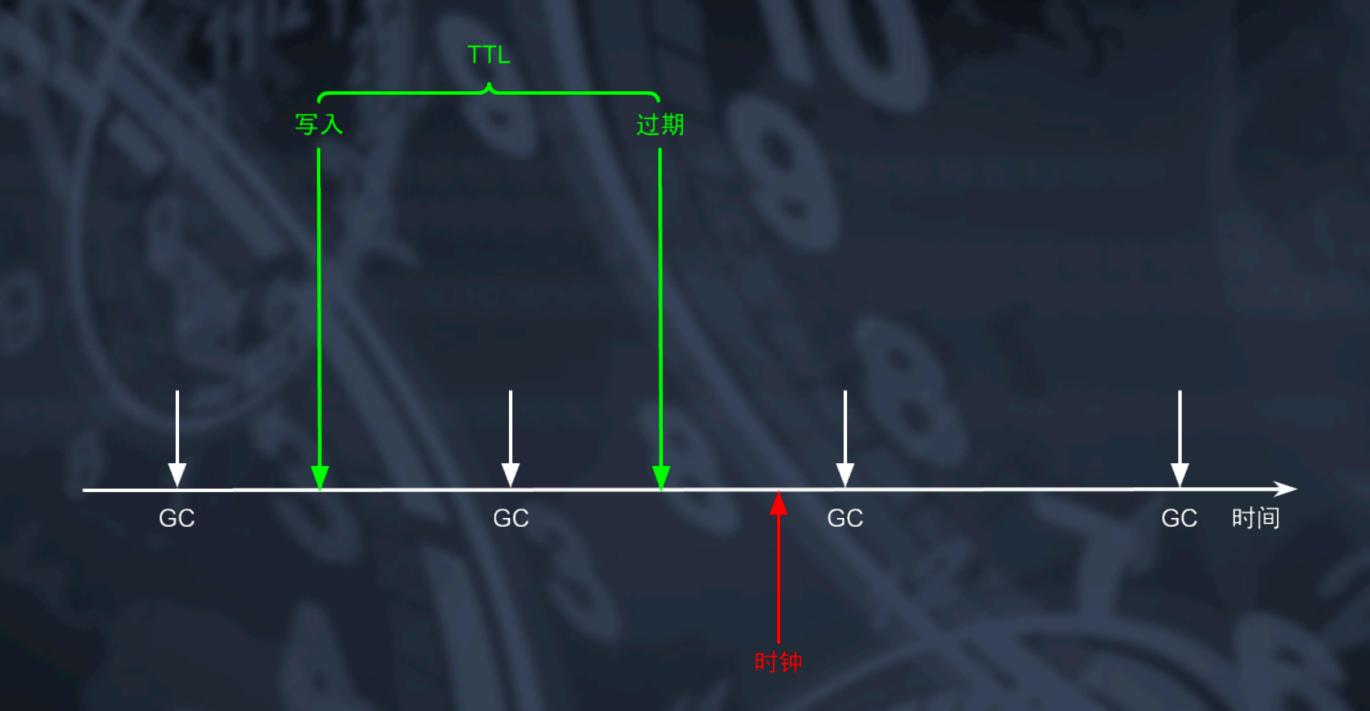

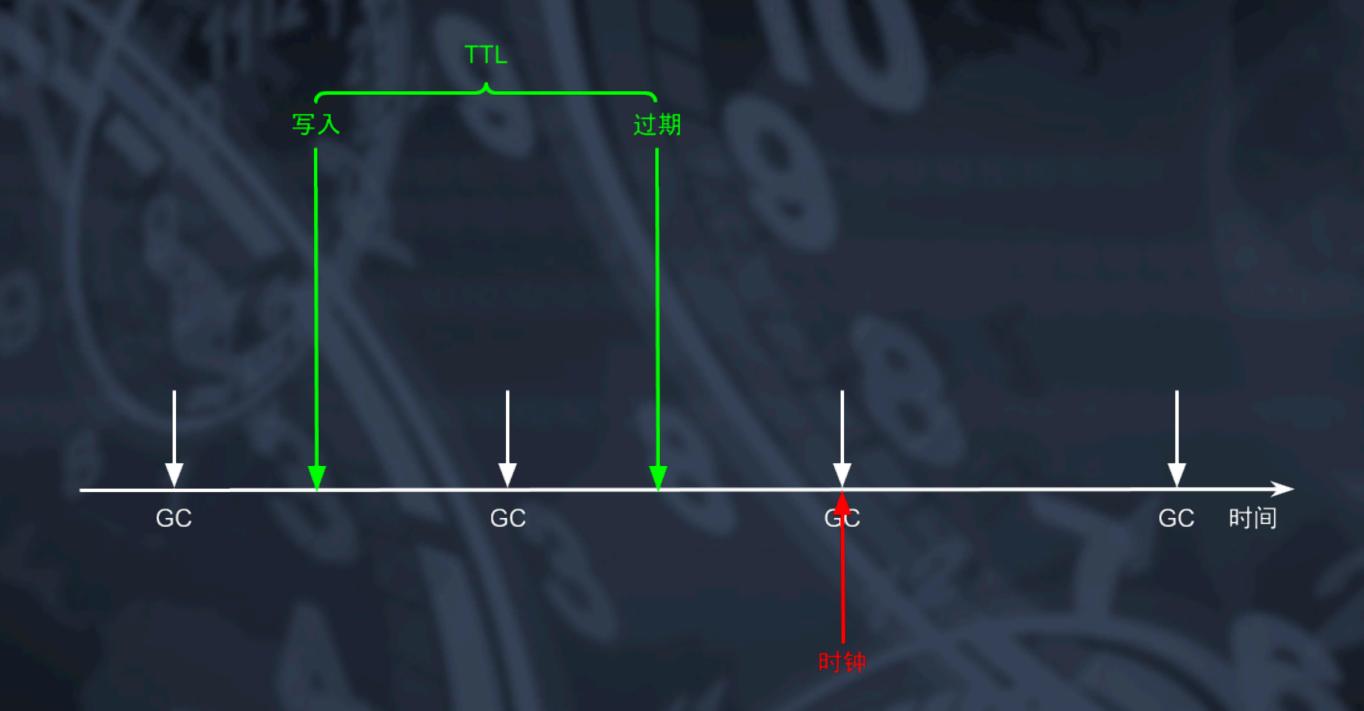

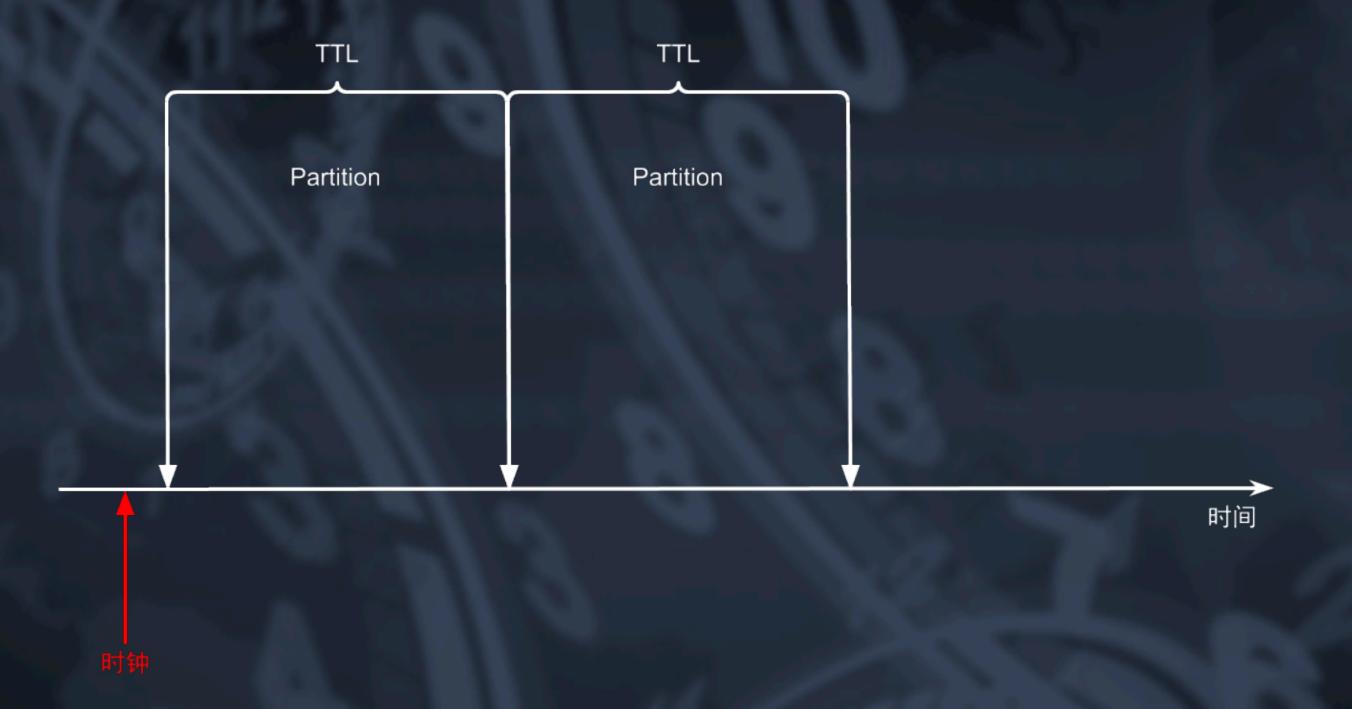

#### 回收策略 - 按分区

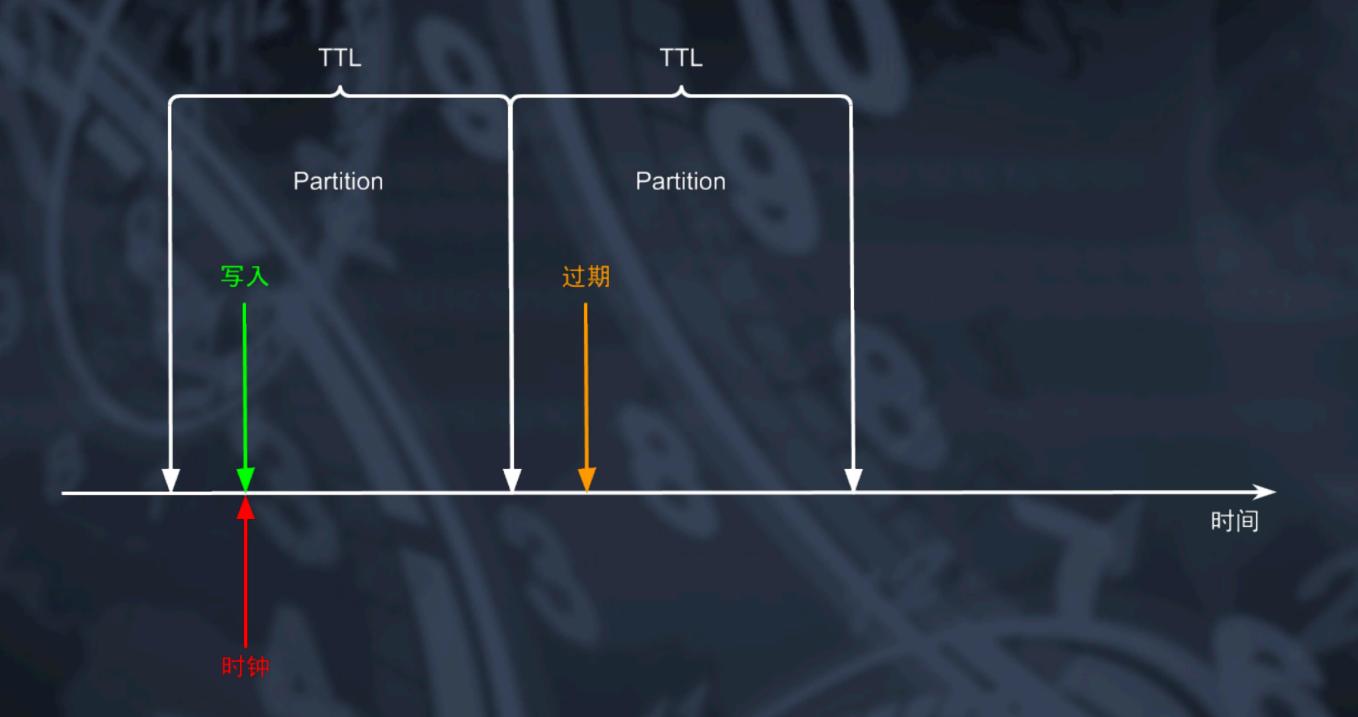

```
CREATE TABLE ttl_table {
  id varchar(255),
  author varchar(255),
  content varchar(65535),
  PRIMARY_KEY(id)
} TTL='10m' TTL_GRANULARITY='PARTITION';
```

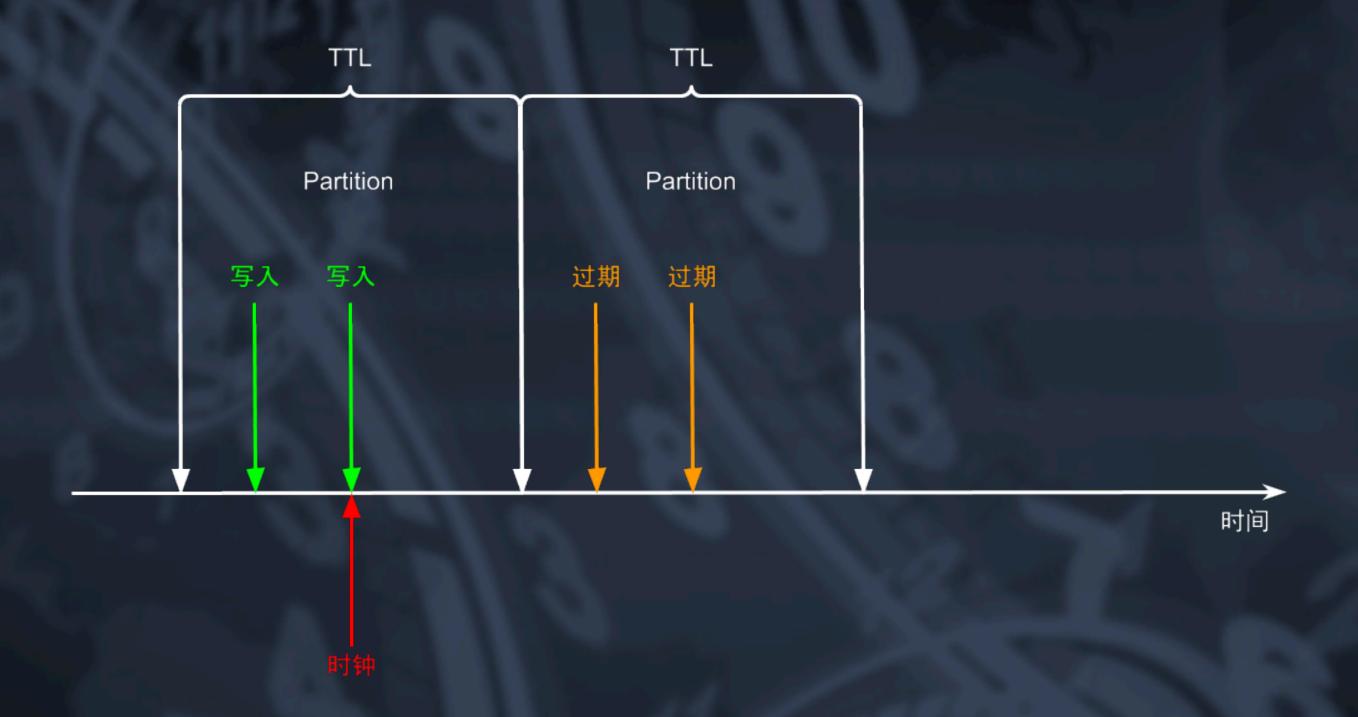

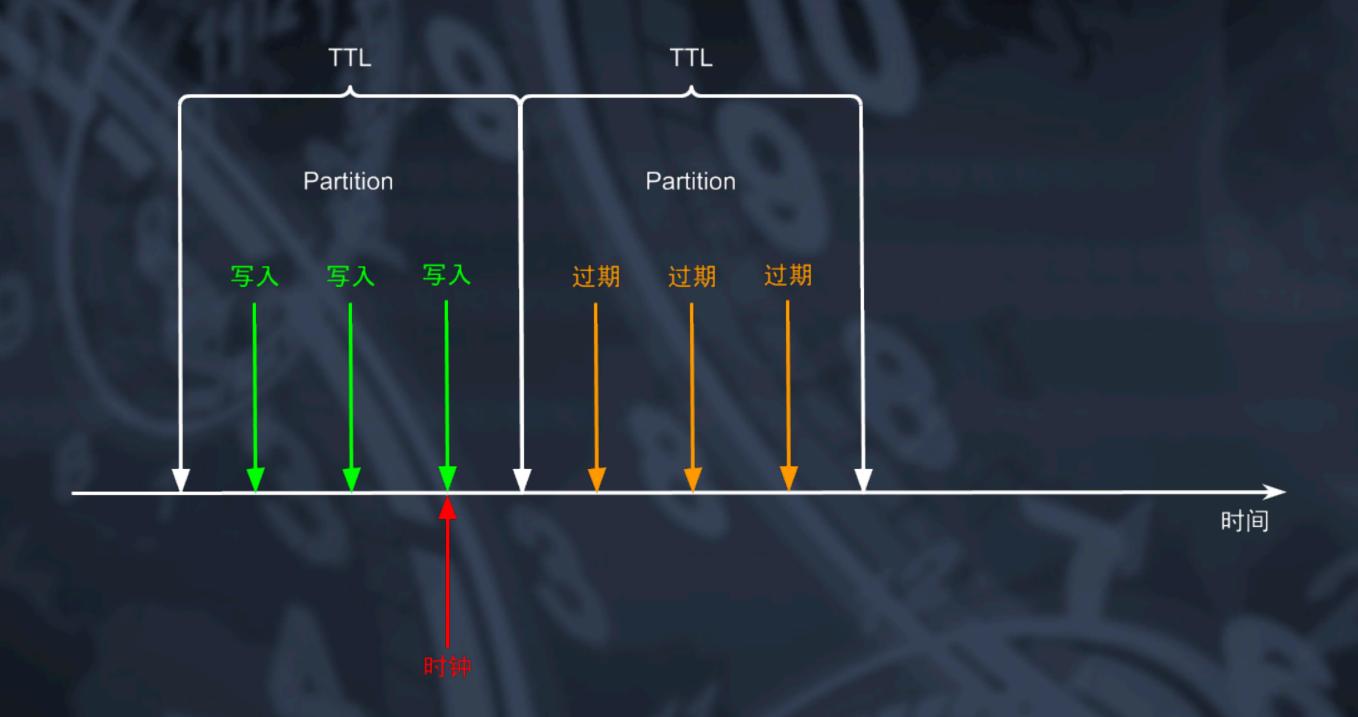

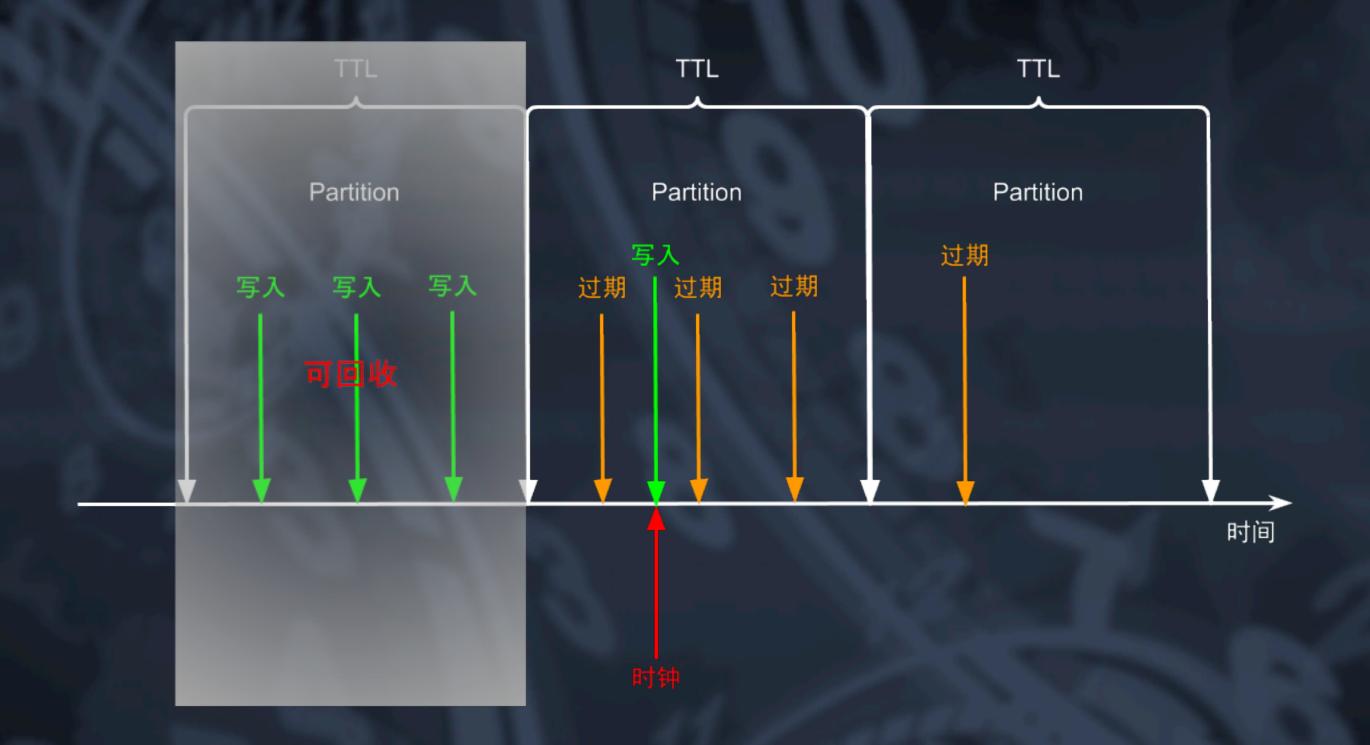

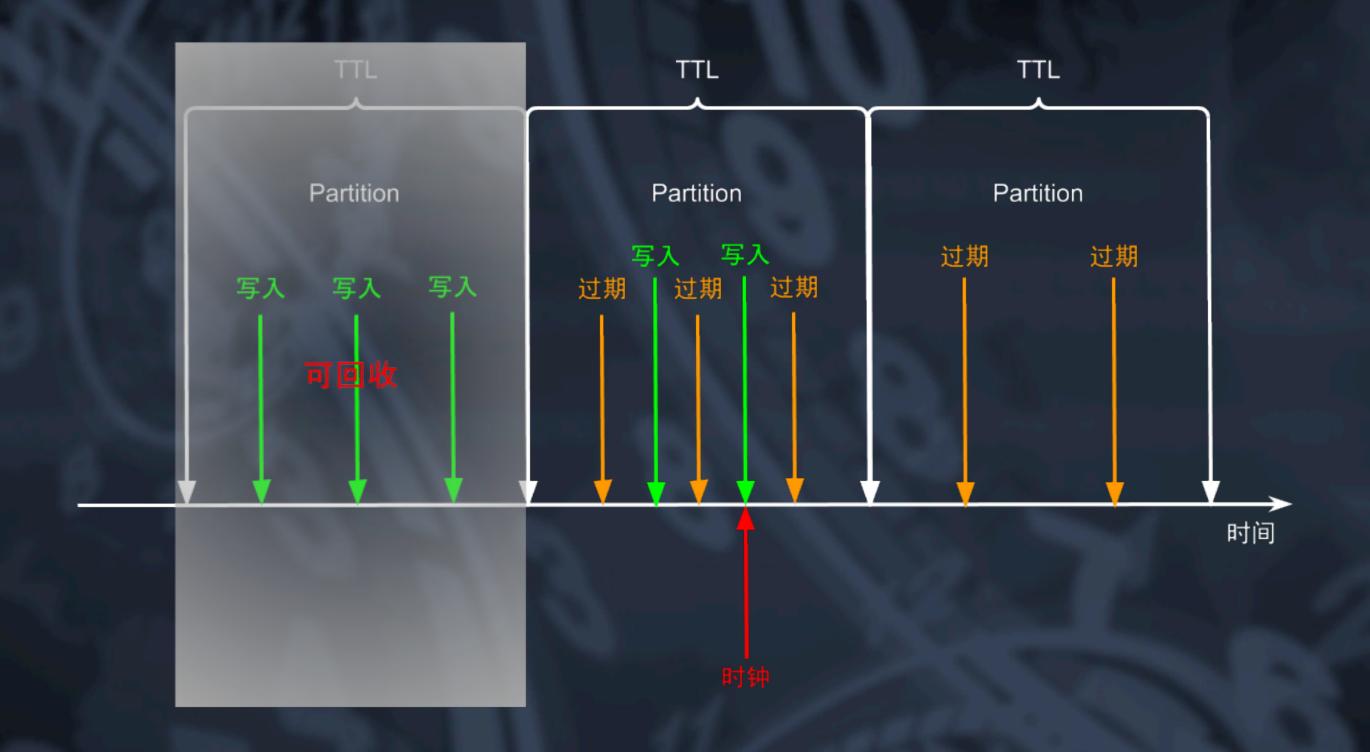

#### 应用场景 - 维度报表

- 决策支撑
- 横向扩展
- 字典编码
- 列存储
- 历史报表自动过期

https://github.com/tidb-hackathon/kylin

#### 应用场景 - Distributed Tracing

- 高吞吐写入
- 易维护
- 历史跟踪自动过期

https://drive.google.com/file/d/1qT8zoqirvop70QmpEAfiQgG8bbl-UYX/view

#### 应用场景 - Kubernetes long term event store

- No more 'mvcc: database space exceeded'
- 跟踪历史,追溯问题
- 高性能
- 结构化查询能力
- 历史事件自动过期

https://github.com/tidb-hackathon/kubernetesevent-exporter TiDB Hackathon 2020

#### 应用场景 - 时效推送

- QoS 1 & 2 会话持久存储
- 新闻热点
- AMBER Alert
- 天气预报
- 更多 XXX 场景过期数据自动消失

https://github.com/tidb-hackathon/emitter

#### 应用场景 - IoT

- 万物互联
- 数据爆炸
- 实时分析
- 短期分析
- 数据价值高速贬值
- Bring everything into TiDB, Affordably

#### TiDB - Unleash unlimited possibilities

#### Thanks
